

CONCRETE DRIVEWAY INSTALLATION: HOW IT WORKS

CONSULTATION & ESTIMATE

WITHIN 48-72 HOURS

Within 24 hours of your request, we will contact you to schedule a consultation. Within 48-72 hours, you will have an estimate in hand.

During your consultation, we will measure the area to be paved, assess your sub-base requirements and walk-thru the decorative design options available. With your preferences decided, Carolina Driveways and More will provide you with a written estimate to review.

LET US KNOW WHEN YOU'RE READY

IT'S UP TO YOU

When you have notified Carolina Driveways and More of your intention to proceed, we will request a signed estimate and we will provide you a written receipt along with your driveway warranty if applicable. 50% down payment is required to begin the job with the balance paid upon completion of the project.

CONCRETE PROJECT SCHEDULING

7-14 DAYS

Projects are placed into the production schedule based on your preference for dates and our existing bookings. Most projects kick-off within 7-14 days. Should weather or other issues alter the schedule you will be notified proactively.

PERMITS AND SAFETY

WILL VARY

Carolina Driveways and More follows code and safety best practices. Any necessary permits will be pulled and precautions are taken (including locating and marking utilities) prior to beginning your project.

CONCRETE DRIVEWAY INSTALLATION: HOW IT WORKS

PREPARE THE SITE

DAY 1

The demolition of your existing driveway and haul away usually takes one full day and will consist of ripping and removing the old paving. We will be excavating as needed in preparation for any new sub-base that will be added. Any removed material will be hauled away for recycling.

LET'S POUR

DAY 2-3

With the scope of most projects, the concrete for a driveway will typically take one day (possibly two).

LET IT REST

DAY 4-7

Curing is critical to the long-term durability of your concrete project. We advise our customers to keep vehicles and heavy equipment off the new concrete for 3-5 days. Depending on weather conditions, you'll be free to walk on the space the next day.

DRIVE BUT DON'T PARK

NEXT 2-4 WEEKS

We typically advise our clients to wait a full 2-4 weeks before parking vehicles on the new driveway. Since weather conditions and the scope of the project could play a factor, our team will advise you as to how long our recommendation is for your project prior to parking. You will be able to drive over the surface after the initial curing but advised to park on the street or in your garage until a couple of weeks have passed.

NOW IT'S TIME TO ENJOY!
